FOURTH QUARTER 2009 REPORT COMMENTS

The fourth quarter 2009 report includes a review of the enforcement and compliance samples for each Class I industry, a summary of the enforcement charges and administrative penalties, and a summary of the compliance status of each Significant Industrial User (SIU) who has been in violation of discharge limits or administrative requirements.

The compliance status terminology consists of Achieved Compliance, Consistently Achieving Compliance, Inconsistently Achieving Compliance, and Significant Noncompliance.

This terminology is defined as follows:

Achieved Compliance indicates that an industry successfully completed corrective actions for violations occurring during the previous quarter and was in 100% compliance during the reporting quarter.

Consistently Achieving Compliance (CAC) indicates that an industry was in 100% compliance during the reporting quarter.

Inconsistently Achieving Compliance (IAC) indicates that an industry was not in 100% compliance during the reporting quarter but did not meet the criteria of Significant Noncompliance.

Significant Noncompliance (SNC) as defined in CFR 403.8 is a compliance status in which the industry meets any of the following criteria:

- Violations of Wastewater Discharge Limits
 - a. Chronic Violations of wastewater discharge limits, defined here as those in which sixty-six percent (66%) or more of all of the measurements taken during a six-month period exceed (by any magnitude) the daily maximum limit or the average for the same pollutant parameter.
 - b. Technical Review Criteria (TRC) Violations, defined here as those in which thirty-three percent (33%) or more of all of the measurements for each pollutant parameter taken during a six-month period equal or exceed the product of the daily maximum limit or the average limit multiplied by the applicable TRC (TRC=1.4 for BOD, TSS, fats, oil and grease, and 1.2 for all other pollutants except pH.
 - c. Any other violation or violations of an effluent limit (average or daily maximum) that the Control Authority believes has caused, alone or in combination with other discharges, interference or pass through, or endangered the health of the POTW personnel or the general public.
 - d. Any discharge of a pollutant that has caused imminent endangerment to human health/welfare or to the environment and resulted in the POTW=s exercise of its emergency authority to halt or prevent such a discharge.
- Failure to meet, within ninety (90) days after the schedule date, a compliance schedule milestone contained in a local order for starting construction, completing construction, or attaining final compliance.
- Failure to provide reports within forty-five (45) days from the due date
- Failure to accurately report noncompliance.
- Any other violation or group of violations that the Control Authority considers being significant.

The City of Fresno realized a 95.1% discharge compliance rate for SIUs operating in this quarter, having thirty-nine out of forty-one discharging SIUs in compliance. For administrative parameters, a 92.7% compliance rate was realized.

Accordingly, staff issued two (2) Administrative Warning Notices, one (1) Violation Notice Administrative, one (1) Warning Notice and one (1) Violation Notice Discharge. Cost recovery charges for the quarter were \$922.00 in discharge enforcement charges, zero in administrative enforcement charges, and \$1,750 in penalties.

In addition to responding to violations, staff has a policy of communication to help SIUs identify and resolve problems before they escalate into a more serious situation. Consequently, there were forty-one (41) Compliance Inspections and five (5) Enforcement Inspections, for a total of forty-six (46) inspections conducted during the fourth quarter of 2009.

An adequate sampling program is also crucial in monitoring the rate of compliance and, subsequently, the effectiveness of a pretreatment program. In the fourth quarter of 2009, 292 samples were collected and analyzed for metals, oil and grease, and pH. A review of the data reveals that one (1) of the fifteen (15) oil and grease samples (6.7%) were in violation, one (1) of the 265 samples (0.38%) of pH were in violation and metals was in compliance.

In order to disseminate the latest information concerning the Pretreatment Program and other issues that might impact the industrial users, regular meetings are being held. These meetings are open to both significant and non-significant industrial users. The first meeting was held in March 2007 and occurs once in each calendar quarter. Topics cover any subject pertinent to the Pretreatment Program and have included the Pretreatment Streamlining Regulations and subsequent local municipal code amendments, local limits, pretreatment system technology, etc. Other areas of interest are also covered including rate increases that were adopted by the City Council and research into forming a special district that will be separate from the City of Fresno. Suggestions are also requested for future meetings.

The first quarterly meeting for calendar year 2009 occurred on 11 February 2009. The agenda included an update to the expansion project going on at the regional facility, a presentation on how to complete wastewater discharge permit applications and flow monitoring reports, and updates on the Enforcement Response Plan and Pretreatment Program revisions.

The second quarterly meeting for calendar year 2009 was held on 13 May 2009. The agenda included the latest update on the expansion project, updates on the Enforcement Response Plan and Pretreatment Program modifications, and an overview of the industrial stormwater regulations presented by representatives of the Fresno Metropolitan Flood Control District.

The third quarterly meeting for calendar year 2009 was held on 12 August 2009. The agenda included an update on the salinity issues concerning the Central Valley as well as the EC issues that the City of Fresno is facing. As part of the discussion, the EC of the general influent entering the facility was presented as well as the EC of each of the three trunklines.

The fourth quarterly meeting for calendar year 2009 was held on 9 December 2009. The sole item on the agenda was a presentation on the development of a local limit to control salinity. This included the need for a technically-based limit, the calculation for both Maximum Allowable Headworks Loading and Maximum Allowable Industrial Headworks Loading, the proposed limit

itself, and the adoption process to get the limit approved by both the Fresno City council and the Regional Board.

The City of Fresno and Fresno Metropolitan Flood Control District continue to work in mutual cooperation toward maintaining the Storm Water Program. Pretreatment Program inspections have incorporated Storm Water concerns. Each agency investigates complaints and reports of illegal discharges and will make referrals to the other agency when necessary.

The Third Quarter 2009 Report introduced the Fats, Oils, and Grease (FOG) Program, which began in July 2008. The previous report comments incorrectly reported a total of 326 Food Service Establishments having been inspected and permitted. At the end of the fourth quarter 2009, a total of 294 Food Service Establishments have been inspected and permitted. Inspections are planned to be conducted systematically to avoid overlap, however hot spot referrals from the Sewer Maintenance Division of either blocked lines or potential sanitary sewer overflows take highest priority.

Keeping lines of communication open with the industrial users is always beneficial but a strong public education program is essential to support the Pretreatment Program. As such, the City of Fresno has allocated a substantial amount of funds to promote pollution prevention for the non-regulated dischargers. Previous reports highlighted the various aspects of the different public campaigns including the printed materials and media outreach specifically for the FOG Program and the Seriousness of Salt campaign.

To expand on the public education forum concerning salinity, staff members at Wastewater Management have embarked on a Salt Footprint project. Samples are being collected from a few activities at home to analyzed for metals, minerals, nitrogen-based constituents, and various anions and cations. The intent is to get a better understanding of what day-to-day products contribute to the salinity of wastewater and then pass that information on to the general public.

Amendment to the Third Quarter Report

For the third quarter, Wawona Frozen Foods – Clovis was incorrectly reported as Achieved Compliance for failing to submit a wastewater discharge permit application. The correct industry was Wawona Frozen Foods – Fresno. An amended status report is attached to the end of these comments.

City of Fresno - Wastewater Management Division
Significant Industrial User List

<u>Industry</u>	<u>Industry Type</u>
Ameripride Services	Industrial Laundry
